

Build an AI-ready workforce.

Live, instructor-led training built around your company, your teams and the work they do every day.

PRACTICAL

ROLE-SPECIFIC

BUILT FOR REAL WORK

OUR SECRET SAUCE

We do not begin with a standard syllabus.

We first understand your business, your roles and the repetitive work your people handle.

AI

Then we tailor the training so employees can apply AI in their workflows and safely offload repetitive tasks.

OUR DIFFERENCE

Before we teach AI, we learn your business.

Generic training may inspire people for a day. Our approach is designed to create useful capability that continues after the session.

01

Discover

Your goals, teams, tools and current AI maturity.

02

Map the work

What employees do, where time is lost and which tasks repeat.

03

Find use cases

High-value opportunities where AI can improve speed or quality.

04

Design the training

Role-specific examples, exercises, prompts and workflows.

05

Train and enable

Live practice, feedback and resources your team can keep using.

**We look for
the work worth
improving.**

THE GOAL

**Not more tools.
Better work.**

Employees leave with the confidence and skill to use AI in their day-to-day workflows, with human judgement and review.

We can conduct a focused half-day workshop for leadership, business teams or technical functions.

WHAT TEAMS LEARN

Practical AI skills for real work.

Every exercise is connected to a workplace task. Participants practise, compare outputs, ask questions and build repeatable ways of working.

01

Draft & communicate

Emails, reports, briefs and clearer business communication.

02

Research & summarise

Find, compare and condense information with better verification.

03

Analyse & organise

Turn documents and data into useful insights and structured outputs.

04

Create faster

Presentations, content, proposals and internal knowledge material.

05

Build workflows

Reusable prompts, automations and role-specific AI processes.

06

Use AI responsibly

Privacy, sensitive data, bias, hallucinations and human review.
